Biomedical Informatics Summer Internship Poster Session

The Department of Biomedical Informatics Summer Internship Program is currently in its fourth year of operation. Students in this program are trained in biomedical informatics research tools and methods that are then applied in biomedical and clinical research opportunities in the labs of BMI faculty. Many of these projects involve observations of medical procedures and practices and translate into biomedical informatics driven solutions to address problems facing researchers and medical professionals in the Wexner Medical Center (OSUWMC).

This poster session allows trainees to present on their summer research activities. The poster topics include app design and development, medication adherence, personalized health care, usability survey research, drug response co-expression networks, predictive model, chemotherapy treatment on cholesterol metabolism, secondary uses of Medicare data, etc. All university faculty, staff, and students are welcome to attend.

Time: Wednesday, August 12th, 11:00AM – 2:00PM
Location: Biomedical Research Tower Lobby

*Light refreshments will be available.*
